# Safety Data Sheet

# Glycerol, semi-refined

#### IDENTIFICATION

Synonyms semi-refined: 1,2,3-trihydroxypropane, 1,2,3-propanetriol, glycerin(e), glycyl alcohol

CAS # 56-81-5 Europe EC# 200-289-5

**Material Use** 

EMERGENCY INFORMATION

In the U.S.A. Call CHEMTREC (800) 424-9300 In Canada Call CANUTEC (collect) (613) 996-6666

#### II HAZARD IDENTIFICATION

GHS Class NOT HAZARDOUS per OSHA Hazard Communication / GHS)

(Category)

Signal Words NONE

Hazard Statements NONE

GHS Precautionary Statements for Labelling NONE

Ш	COMPOSITION	CAS	%	TLV	$LD_{50} (mg/kg)$	$LD_{50}$ (mg/kg)	LC <sub>50</sub> ppm
1,1,1	COM OBITION	NUMBER		ppm / mg/m³	ORAL	SKIN	INHALATION
1.2.3-Trihydroxypropane		56-81-5	>92%*	2.7 / 10	4090	>10.000	150

<sup>\*</sup> NOTE: The remaining <8% consists of miscellaneous organic substances, including potassium soaps & miscellaneous free fatty acids – all not hazardous.

#### IV FIRST AID

NOTE: Glycerol, semi refined is non-hazardous according to the OSHA / GHS Hazard Communication Standard and poses minimal risks to chemical handlers and end users. Practicing Good Manufacturing Practices (GMPs) and Good Handling Procedures (GHPs) applies to all chemical, accordingly, the inadvertent inhalation of vomited material may seriously damage the lungs. The danger of this is far greater than the risk of poisoning through absorption of this non-toxic product. The stomach should only be emptied under medical supervision, after the installation of an airway to protect the lungs. As with any chemical GMPs to eliminate the route of exposure point to:

SKIN: Wash with plenty of water. Remove contaminated clothing and do not reuse until thoroughly laundered. Seek medical help

promptly if there is persistent itching or redness in the affected area.

EYES: Wash eyes with plenty of water, holding eyelids open. Seek medical assistance promptly if there is irritation. INHALATION: Remove from contaminated area promptly. **CAUTION: Rescuer must not endanger himself!** If victim's

breathing stops, administer artificial respiration and seek medical aid promptly.

INGESTION: Give plenty of water to dilute product. Do not induce vomiting.

cont'd next page

### V FLAMMABILITY & FIRE-FIGHTING

Flash Point 199°C / 390°F (closed cup)

Autoignition Temperature 370°C / 698°F¹, 429°C / 804°F¹ – decomposes at 290°C / 554°F; autoignition of decomp. products

Flammable Limits not known

Combustion Products carbon monoxide, nitrogen oxides, smoke, acrolein, part oxidised hydrocarbon fragments Firefighting Precautions alcohol foam best, dry chemical, water fog; water jet causes frothing; firefighters to wear SCBA

Static Discharge cannot accumulate a static charge

#### VI ACCIDENTAL RELEASE MEASURES

Leak Precaution dyke to control spillage and prevent environmental contamination

Handling Spill recover free liquid with suitable pumps; absorb residue on an inert sorbent, sweep, shovel & store in closed

containers for disposal

#### VII HANDLING & STORAGE

Glycerol absorbs moisture from air. Keep dry and away from oxidising agents. Never cut, drill, weld or grind on this container, empty or full. Always replace drum, pail or IBC cap prior to moving the container. Avoid generating or breathing product mist. If product mist forms in use, install adequate ventilation to clear workplace air. Avoid prolonged contact with skin & wash work clothes frequently. An eye bath should be available near the workplace.

NOTE: Glycerol is very sweet. Keep away from children & animals!

#### VIII EXPOSURE CONTROL & PERSONAL PROTECTION

ACGIH PEL-TWA 10mg/m³ (total dust), 5mg/m³ (respirable fraction) ACGIH STEL not listed OSHA PEL-T-TWA 15mg/m³ (total dust), 5mg/m³ (respirable fraction) OSHA STEL not listed

Ventilation no special mechanical ventilation required

Hands no special protective gloves required – butyl & neoprene are impervious; other types also protect

Eyes safety glasses with side shields – *always protect eyes!* 

Clothing no special protective clothing required

#### IX PHYSICAL AND CHEMICAL PROPERTIES

NOTE: for Flash Point, Autoignition Temp, & Flammable Limits see Part 5.

Odour & Appearance clear, grey-brown, viscous, hygroscopic sweet-tasting liquid (glycerol is 60% assweet as

cane sugar); may have a rancid butter odour

Odour Threshold not known

Vapour Pressure 0.0023mmHg / 0.00031kPa (20°C/ 68°F) – for pure glycerol

Evaporation Rate (Butyl Acetate = 1) not considered volatile Vapour Density (air = 1) 3.2 – for pure glycerol

Decomposition Temperature 290°C / 554°F – may polymerize above 150°C/300°F

Boiling Point decomposes without boiling

Melting Point 18°C / 64°F – for pure glycerol; may vary depending on the impurities present

Specific Gravity 1.264 (20/20°C) – for pure glycerol

Water Solubility complete

- in other solvents alcohols, glycols; insoluble in hydrocarbons, chlorinated hydrocarbons and ethers

 $Log \; P_{o/w} \left( \textit{Octanol/H}_2\textit{O Partition Coefficient} \right) \; \text{-} 2.6$ 

Viscosity 1490centipoise (20°C/68°C) – for pure glycerol

pH >3.5\*

Molecular Weight 92grams/mole (glycerol)

cont'd next page

<sup>\*</sup> The pH may range from a low of 3.5 to slightly alkaline, depending on relative proportion of free fatty acids & potassium soaps present.

#### X REACTIVITY

Dangerously Reactive With strong oxidizing agents (chromium trioxide, potassium chlorate, or potassium permanganate)

may cause an explosion

Also Reactive With acetic anhydride

Chemical Stability stable, but may polymerize above 150°C/300°F; decomposition above 290°C/554°F

Decomposes in Presence of high temperatures

Decomposition Products toxic acrolein fumes may form on thermal decomposition

Mechanical Impact not sensitive

#### XI TOXICITY INFORMATION

#### i. ACUTE EXPOSURE

Skin Contact softens skin; not irritating<sup>1</sup>

Skin Absorption slight, no toxic effects likely by this route

Eye Contact may irritate – if the pH is low (eye irritancy depends on the presence of potassium soaps & on the titre

of short-chain fatty acids (pH) present

Inhalation mist may be slightly irritating but expected to cause no damage

Ingestion little to no effect; very large doses – ½ liter – may damage red cells & cause bloody urine – brief

effect because glycerol is very rapidly metabolized – not a route of industrial exposure

 $LD_{50}$  (oral) 12,600 & 27,000<sup>1</sup>, 27,200mg/kg (rat), 4090, 23,000<sup>1</sup> & 38,000mg/kg (mouse), 27,000mg/kg (rabbit),

7750 & 10,000-11,500mg/kg (guinea pig)<sup>1</sup>

LD<sub>50</sub>(skin) >10,000, 21,900 & 23,000mg/kg (rabbit), 56,880mg/kg (guinea pig)<sup>1</sup>

LC<sub>50</sub> (inhalation) 38ppm/143mg/m<sup>3</sup> (rat), 2750mg/m<sup>3</sup> (rat – achieved by bubbling through 200°Cglycerol)<sup>1</sup> (Very low vapor pressure plus high viscosity makes exposure to glycerol by inhalation highly unlikely.)

#### ii. CHRONIC EXPOSURE

General little to no effect Sensitizing not a sensitizer<sup>1</sup>

Carcinogen/Tumorigenic not known to be a tumorigenic or a carcinogen in humans or

animals<sup>1</sup> Reprod. Effect no known effect on humans or animals<sup>1</sup>

Mutagen not known to be a mutagen or teratogen in humans or animals<sup>1</sup>

Synergistic With not known

NOAEL (reproduction) 2000mg/kg/day (rat – two generations)<sup>1</sup>

**NOTE:** The above  $LD_{50}$ ,  $LC_{50}$  values are for pure glycerol; the toxicity of the potassium soaps (major impurity in this product) is not known. The toxicity of short chain fatty acids is known, but their concentration is low & variable; no toxicity value can be calculated.

#### XII ECOLOGICAL INFORMATION

Bioaccumulation readily metabolized (biological ½-life 30-40 min); cannot bioaccumulate

Biodegradation biodegrades readily & *very* rapidly in the presence of oxygen; 94% & 98% in 24hours<sup>1</sup>
Abiotic Degradation reacts with atmospheric hydroxyl (OH) radicals; its estimated ½-life in air is 7hr

Mobility in soil, water water soluble; moves readily through soil & the water column; rapid biodegradation limits movement

Aquatic Toxicity data below indicates extremely low aquatic toxicity

LC<sub>50</sub> (Fish 96 hr) 54,000<sup>1</sup>, 51,000-57,000mg/liter (Oncorhynchus mykiss), >10,000mg/litre (Leuciscus idus & Idus idus, 48hr)

885mg/liter (Pimephelas promelas)<sup>1</sup>

EC<sub>50</sub> (Crustacea, 48hr) 1995mg/liter (Daphnia magna)<sup>1</sup>, >10,000mg/liter (Daphnia magna – 24hours)<sup>1</sup>

TGK 5% (Crustácea, 48hr) >10,000mg/litre (Chilomonas paramecio & Uronema parduczi)

EC<sub>50</sub> (Algae) 46,000mg/liter (Braciomonas submarina) – *but some algae grow better with glycerol* . . . TGK 3%\* (Algae) >10,000mg/liter (Scenedesmus quadricauda)<sup>1</sup>, 2900mg/litre (Microcistis aeruginosa)<sup>1</sup>

TGK 5%\* (Flagellates) >10,000mg/liter (Chilomonas paramecium & Uronema parduczi),3200mg/litre (Enterosyphon sulcatum)

EC<sub>0</sub> (Bacteria) >10,000mg/liter (Pseudomonas putida)<sup>1</sup> – not an EC<sub>50</sub>, but an EC<sub>0</sub>; no inhibition seen

TGK 3%\* (Bacteria) >10,000mg/litre (Pseudomonas putida)

**NOTE:** The impurities (potassium soaps & free fatty acids) contribute minimally to overall aquatic toxicity.

\* TGK is the threshold concentration for 3% or 5% decrease in optical density.

cont'd next page

#### XIII DISPOSAL CONSIDERATIONS

Waste Disposal do not flush to sewer; mix with flammable waste, incinerate in approved facility with flue gas monitoring &

scrubbing; local regulations may permit disposal in sanitary landfill; biological treatment is an excellent option

Containers **Drums** should be reused. Recondition and pressure test by a licensed reconditioner prior to re-use.

**Pails** must be vented and thoroughly dried prior to crushing and recycling.

**IBCs** (intermediate bulk containers): polyethylene bottle must be pressure tested & recertified at 30 months. Replace at 60 months (5 years). Steel containers must be inspected, pressure tested & recertified every 5 years.

Warning: never cut, drill, weld or grind on or near this container, even if empty.

#### XIV TRANSPORT INFORMATION

USA 49 CFR & Canada TDG
Product Identification Number
Shipping Name
Classification
Marine Pollution
ERAP Required
Reportable Quantity (RQ)

UN – not regulated for transport not regulated for transport not regulated for transport not a marine pollutant No none

SARA 311/312 Acute: Yes Chronic: Yes Fire: No Sudden Release of Pressure: No Reactivity: No

### XV REGULATIONS

Canada DSL on inventory
U.S.A. TSCA ACTIVE
Europe EINECS on inventory
OSHA Non-Hazardous

This very common substance is on most national chemical inventories.

No SARA 311/312

#### U.S.A. Regulations:

Allowable Tolerances: Residues resulting from the use of the following substances as either an inert or an active ingredient in a pesticide chemical formulation, including antimicrobial pesticide chemicals, are exempted from the requirement of a tolerance under FFDCA section 408, if such use is in accordance with good agricultural or manufacturing practices. Glycerin is included on this list.

OSHA Standards: Permissible Exposure Limit: Table Z-1 8-hr Time Weighted Avg: 15 mg/cu m. /Mist, total dust/ Permissible Exposure Limit: Table Z-1 8-hr Time Weighted Avg: 5 mg/cu m. /Mist, respirable fraction/ Vacated 1989 OSHA PEL TWA 10 mg/cu m is still enforced in some states. /Mist, total/ Vacated 1989 OSHA PEL TWA 5 mg/cu m is still enforced in some states. /Mist, resp/

NIOSH Recommendations: NIOSH concluded that the documentation cited by OSHA was inadequate to support the proposed PEL (as an 8 hour TWA) of 10 mg/cu m for glycerine (mist).

Threshold Limit Values: 8 hr Time Weighted Avg (TWA): 10 mg/cu m. /Glycerin mist/ Excursion Limit Recommendation: Excursions in worker exposure levels may exceed 3 times the TLV-TWA for no more than a total of 30 minutes during a work day, and under no circumstances should they exceed 5 times the TLV-TWA, provided that the TLV-TWA is not exceeded. /Glycerin mist/ 2011 Notice of Intended Changes: These substances, with their corresponding values and notations, comprise those for which (1) a limit is proposed for the first time, (2) a change in the Adopted value is proposed, (3) retention as an NIC is proposed, or (4) withdrawal of the Documentation and adopted TLV is proposed. In each case, the proposals should be considered trial values during the period they are on the NIC. These proposals were ratified by the ACGIH Board of Directors and will remain on the NIC for approximately one year following this ratification. If the Committee neither finds nor receives any substantive data that changes its scientific opinion regarding an NIC TLV, the Committee may then approve its recommendation to the ACGIH Board of Directors for adoption. If the Committee finds or receives substantive data that change its scientific opinion regarding an NIC TLV, the Committee may change its recommendation to the ACGIH Board of Directors for the matter to be either retained on or withdrawn from the NIC. Substance: Glycerin, mist (56-81-5); Withdraw adopted Documentation and TLV.

Atmospheric Standards: This action promulgates standards of performance for equipment leaks of Volatile Organic Compounds (VOC) in the Synthetic Organic Chemical Manufacturing Industry (SOCMI). The intended effect of these standards is to require all newly constructed, modified, and reconstructed SOCMI process units to use the best demonstrated system of continuous emission reduction for equipment leaks of VOC, considering costs, non air quality health and environmental impact and energy requirements. Glycerol is produced, as an intermediate or a final product, by process units covered under this subpart.

FIFRA Requirements: Residues resulting from the use of the following substances as either an inert or an active ingredient in a pesticide chemical formulation, including antimicrobial pesticide chemicals, are exempted from the requirement of a tolerance under FFDCA section 408, if such use is in accordance with good agricultural or manufacturing practices. Glycerin is included on this list. As the federal pesticide law FIFRA directs, EPA is conducting a comprehensive review of older pesticides to consider their health and environmental effects and make decisions about their future use. Under this pesticide registration program, EPA examines health and safety data for pesticide active ingredients initially registered before November 1, 1984, and determines whether they are eligible for reregistration. In addition, all pesticides must meet the new safety standard of the Food Quality Protection Act of 1996. Pesticides for which EPA had not issued Registration Standards prior to the effective date of FIFRA, as amended in 1988, were divided into three lists based upon their potential for human exposure and other factors, with List B containing pesticides of greater concern and List D pesticides of less concern. Glycerol is found on List D. Case No. 4044; Case Status: No products containing the pesticide are actively registered... The case fis characterized as "cancelled." Under FIFRA, pesticide producers may voluntarily cancel their registered products. EPA also may cancel pesticide registrations if registrants fail to pay required fees or make/meet certain reregistration commitments, or if EPA reaches findings of unreasonable adverse effects; Active ingredient (AI): Glyceroi, IAI Status: The active ingredient in onegar contained in any registered pesticide products.

FDA Requirements: Substances migrating to food from paper and paperboard products used in food packaging that are generally recognized as safe for their intended use, within the meaning of section 409 of the Act: Glycerin is included on this list. Glycerin used as a multiple purpose GRAS food substance in food for human consumption is generally recognized as safe when used in accordance with good manufacturing practice. Glycerin used as a general purpose food additive in animal drugs, feeds, and related products is generally recognized as safe when used in accordance with good manufacturing or feeding practice.

PLEASE ENSURE THAT THIS SDS IS GIVEN TO, AND EXPLAINED TO PEOPLE USING THIS PRODUCT.
